

A Torus Primitive For Particle Shapes With the Discrete Element Method

Matthew R. Kuhn
University of Portland, U.S.A.

Tori and Spheres

Tori and Spheres

Torus Characteristics

1. **Compact geometric representation**
2. Smooth
3. Strictly convex patches
4. A transition between convex and concave patches
5. Simple surface characteristics:
 - principal curvatures
 - directions of principal curvatures
6. Fast contact detection

Geometric Representation

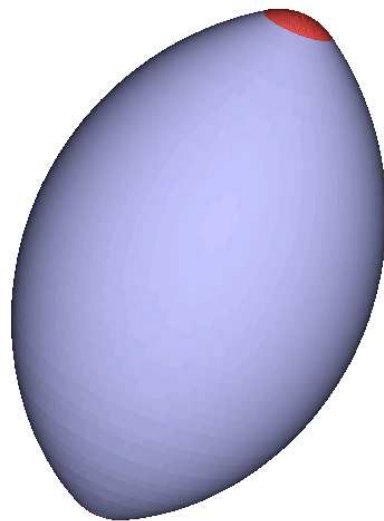

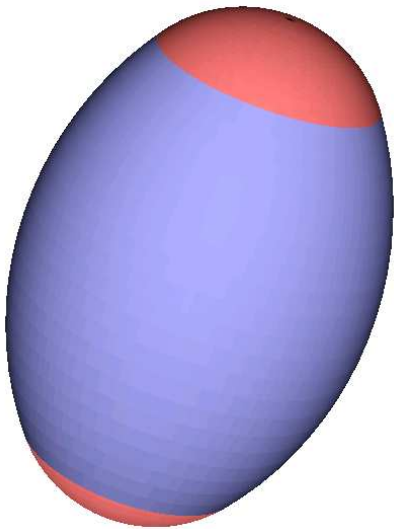

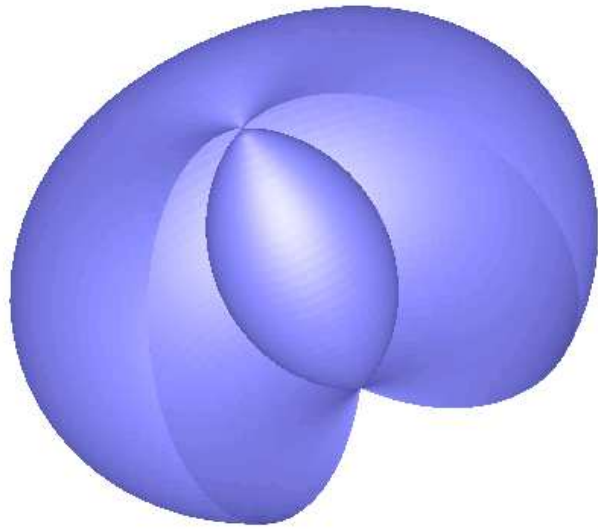

x: Position
a: Orientation

p } Radii
 r }

β_1 } Latitudes
 β_2 }

α_1 } Longitudes
 α_2 }

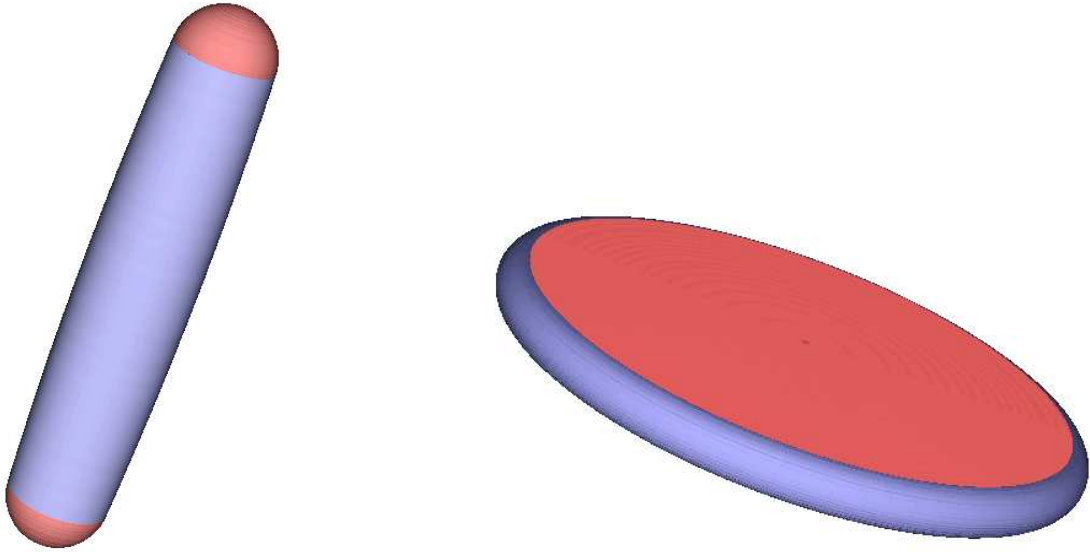

Torus Characteristics

1. Compact geometric representation
- 2. Smooth**
3. Strictly convex patches
4. A transition between convex and concave patches
5. Simple surface characteristics:
 - principal curvatures
 - directions of principal curvatures
6. Fast contact detection

Torus Characteristics

1. Compact geometric representation
2. Smooth
- 3. Strictly convex patches**
4. A transition between convex and concave patches
5. Simple surface characteristics:
 - principal curvatures
 - directions of principal curvatures
6. Fast contact detection

Strictly Convex Patches

Torus Characteristics

1. Compact geometric representation
2. Smooth
3. Strictly convex patches
- 4. A transition between convex and concave patches**
5. Simple surface characteristics:
 - principal curvatures
 - directions of principal curvatures
6. Fast contact detection

Transitions Between Concave and Convex

Torus Characteristics

1. Compact geometric representation
2. Smooth
3. Strictly convex patches
4. A transition between convex and concave patches
- 5. Simple surface characteristics:**
 - **principal curvatures**
 - **directions of principal curvatures**
6. Fast contact detection

Local Surface Curvatures

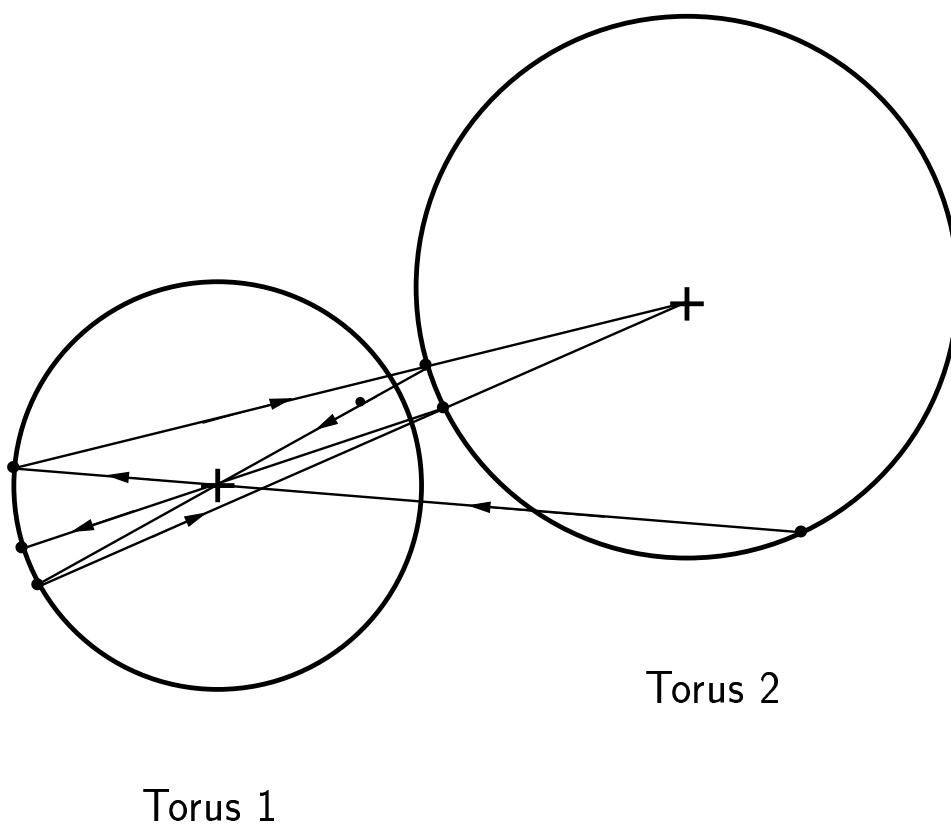

1. Rolling contact mechanisms
2. Contact prediction
3. Rolling (non-holonomic) constraints—hard contacts

Torus Characteristics

1. Compact geometric representation
2. Smooth
3. Strictly convex patches
4. A transition between convex and concave patches
5. Simple surface characteristics:
 - principal curvatures
 - directions of principal curvatures

6. Fast contact detection

Iteration for Contact Inquiry

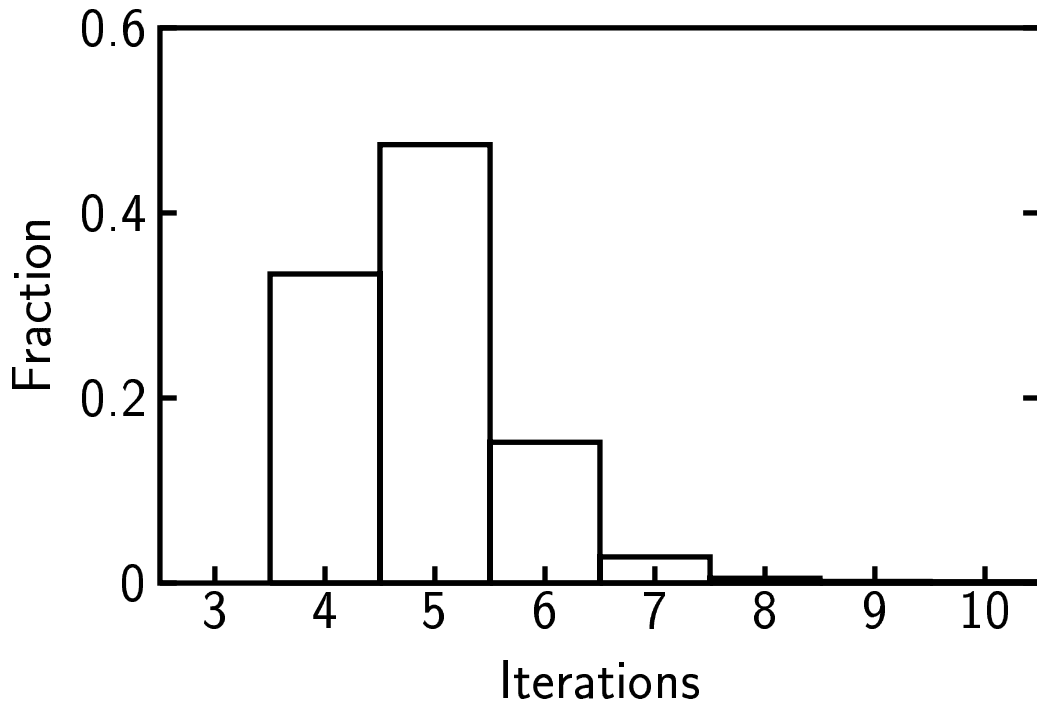

Extremal Distances

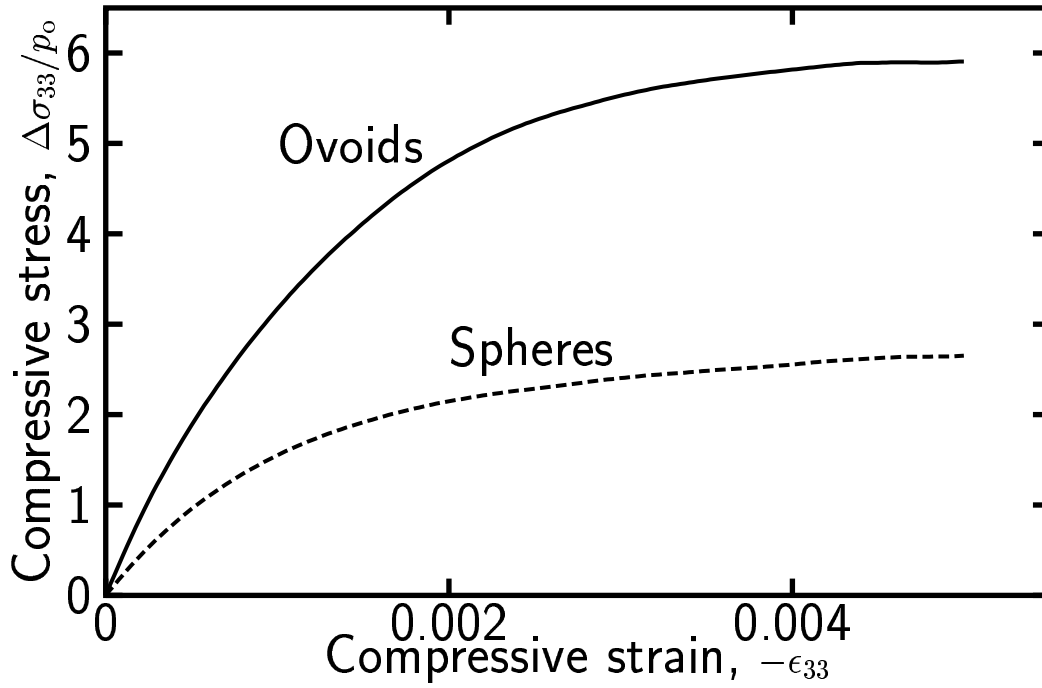

Aitken's Acceleration

Convergence

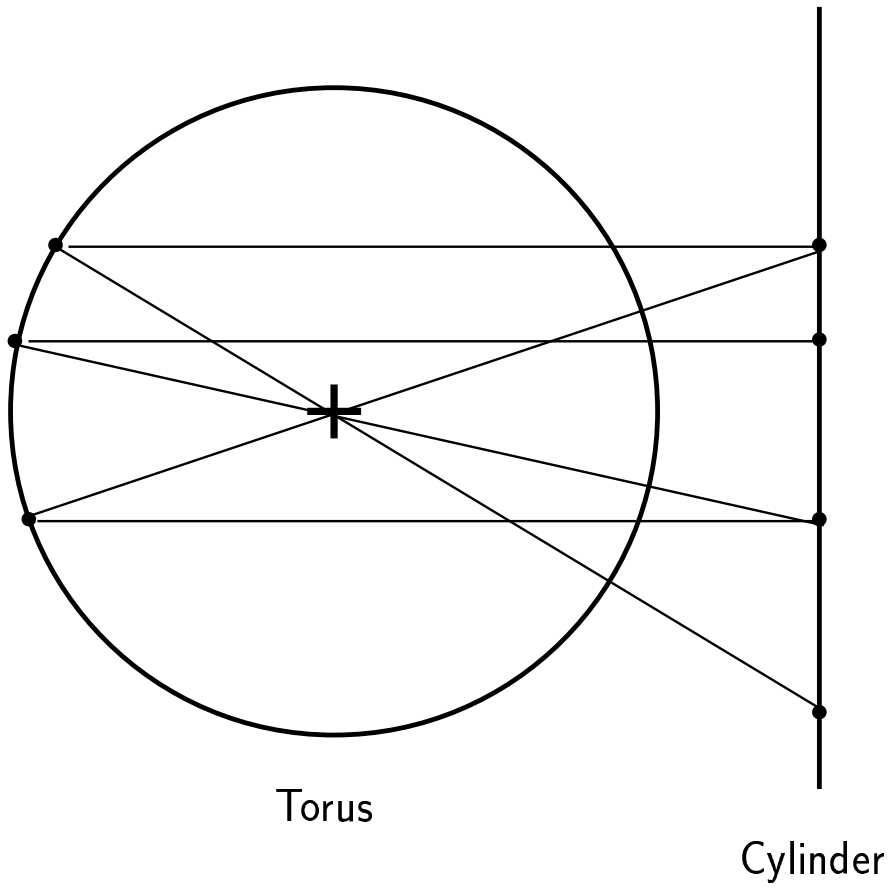

$$\epsilon = 1 \times 10^{-18}$$

Biaxial Compression: Spheres and Ovoids

Torus-Cylinder Iteration

Run-times: Ovoids and Spheres

	Ovoids	Spheres	Ovoids / Spheres
Contact inquiry calls	5.2×10^8	2.5×10^8	2.1
Contact inquiry time, s	528	73	7.2
Total runtime, s	1430	720	2.0

1800 particles

30,000 time steps

1.05 MHz single Athlon processor

Oblate and Prolate Ovoids
