

Donald P. Shiley School of Engineering
EGR 491 Telescope Design, Fall 2019
Assignment 10 – Telescope Design Options

You get to help write the final exam for this class! Please write questions and provide answers as follows:

- a) One question and answer from your own presentation (all presentations are posted on the course page).
- b) One question and answer from your teammates presentation – but different than their question for part (a) above. The two of you need to talk somewhat about this.
- c) One question and answer regarding the design of a telescope. This can be from the class telescope, it can be a question about design in general, it can be something from any of the design related assignments, etc.
- d) **Two** questions and answers from the assignments not directly related to design.

I apply the following criteria for examination questions. You should too.

- Conceptual based, not memorization
- Regarding something important or useful, not obscure
- Reasonable to get correct on the final
- Answers requiring explanation or descriptions should answerable in a brief sentence or two – no longer writeups.
- The answer should be “obviously correct or incorrect” – in other words, not much “gray area” of interpretation.
